DETAILED ACTION

Information Disclosure Statement

1. The information disclosure statement (IDS) filed 01 April 2004 contains reference US Patent No. 4,567,958 of which was previously considered and cited on form PTO-892 as part of Paper No. 5, mailed 28 December 2001. Accordingly, US Patent No. 4,567,958 has been lined through on the IDS filed 01 April 2004.

Reasons for Allowance

2. The following is an examiner's statement of reasons for allowance: The prior art separately discloses the various elements of the claimed V-belt transmission, namely, a crank shaft connected to an engine; a crank shaft having a plurality of crank pins and a crank weight; a transmission case swingably supported around and with respect to a crankshaft; a driving pulley having a fixed pulley half fixed to a crankshaft by a bolt engaged in a bolt hole within the crankshaft; an axially movable pulley half; a chamfered bolt hole; a plurality of cooling fins; a short sleeve; a ramp; a long sleeve; a driven pulley; an axle; driven shaft; a counter shaft; and a plurality of transmission gears. However, the mere disclosure in the prior art of the various elements does not itself render the claimed invention obvious; there must be some motivation to combine the various teachings. In the instant application, the combination of the disclosed elements to reduce vibrations transmitted to the connection between the fixed pulley half of the drive pulley and the crankshaft, specifically to swingably connect a transmission case around and with respect to the crankshaft, in addition to the improved mounting of the fixed pulley half to the crankshaft is not suggested by the prior art. Any combination of the various elements to meet the limitations of the claimed invention would be based on impermissible hindsight.
